

React js installation in our machine.

1) Open node js website and install latest node package.

2) Open this link <https://github.com/facebook/create-react-app>

3) Open command line

- `sudo npm install create-react-app -g` (that means I will install the react app globally)
- `then create-react-app react-complete-guide` (this will create a bundle for you)
- make sure your npm is up to date once it's good then type `npm start`.
- It will run the local server for you, always keeps this server running when you want to work on react project.
